Integrated Video Surveillance for Supermarket

With its unique sales strategy, a Belgian family company, Colruyt has become one of the major players in the Belgian retail network.

With more than 150 shops throughout the country, Colruyt thrives on enabling its customers to shop efficiently at the lowest prices.

Colruyt runs it's own control room based at the head office. To manage hundreds of surveillance cameras digitally, Colruyt selected Quadrox's Enterprise.Service management software.

Product:

CCTV System
Secures Customers and
Protects Staff

Access from Anywhere

With WebCCTV NVR, the control room manager can gain access to the alarm video footage from home or even on the road, via notebook connected to the VPN by GPRS, in case of an incident.

Low Cost of Ownership

The software manages hundreds of NVR's in a logical rather than physical way. Intuitive maps of the monitored areas enable the operator to know the location very well without having to physically visit it even once. All cameras are indicated on the map with individual camera icons. All the operator has to do, in case of the alarm, is click on the required location icon, click on the required camera icon and view the alarm video footage and live view from the incident area instantly.

SNMP based system health service function further reduces the cost of ownership by reporting any camera or recorder malfunction without having to have hundreds of cameras checked manually by guards on a daily basis.

System Settings and User Rights can be automatically configured on hundreds of NVR's at the same time. The software will report all the units not available on the network and continue to send the reports until a user has effectively been generated throughout the network on all units he has user rights for.

A combination of WebCCTV NVR's and WebCCTV Enterprise.Service products from Quadrox keeps the cost of owning cameras and a Network Video Surveillance System to a strict minimum.
